

MTX-T2

Basic 4G/3G 2xRS232 programmable IoT modem

MTX-T2 is an innovative and powerful all-inone solution. Thanks to its set of interfaces (RS232, USB, digital I/O...) and the embedded MTX-Tunnel firmware that provides the MTX-T2 with a basic router-like functionality. this modem can be used in most of the IoT applications with no need for further hardware, shortening the time-to-market and providing a very cost-effective solution. MTX-T2 can be also programmed in JavaJ2ME, for those customers who want to embed their own firmware on it.
